

## NOTES FROM TRC MEETING - 8/9/88

1. EPA rep. (Weeks) does not have comments from respective branches yet. He anticipates these by the end of August. For future meetings, they want 45 days to review our reports.
2. Weeks asked about aquifer parameters - are we sure they're consistent throughout HPIA? He also asked about lead levels - how will we remove lead? Responded that we will determine if lead is a problem during pilot testing - may have to add metals precip. unit.
3. One of the citizens mentioned that the area between site 35 + Hwy. 17 was used for vehicle maintenance during 1950's by 8<sup>th</sup> Engineer Battalion. Potential source of VOCs in that area?

P. Barrett
