Re: MCB Camp Lejeune HPIA Remedial Investigation/Feasibility
Study (RI/FS); Disposal of Drill Cuttings/Fluids

Dear Ms. Sayres:

As stated in the Camp Lejeune RI/FS Sampling Plan dated June 1990, drill cuttings and fluids (well development water and drilling mud) generated during the HPIA well installations shall be maintained/discharged in the immediate vicinity of the new wells. LANTNAVFACENGCOM concurs with this approach for this particular RI/FS project.

Upon analysis of groundwater samples taken from these wells, we can better evaluate if these cuttings/fluids require further sampling and subsequent disposal of as hazardous waste.

Request ESE cordon off (stakes and warning signs/flags) the area containing these drill cuttings/mud to warn pedestrians and discourage access.

LANTNAVFACENGCOM point of contact is Laurie Boucher, P.E., telephone (804) 445-1814.

Sincerely,

C. R. THOMPSON, P.E.
Acting Head
Environmental Programs Branch
Environmental Quality Division
By direction of the Commander
