BASIS OF DESIGN
REMOVAL ACTION
MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

INTRODUCTION

The primary objective of this project is to remove, transport, and dispose of all drums, storage tanks, and containers located at Site 6, Operable Unit No. 2 (OU No. 2). The scope of this project includes the removal, transportation and disposal of all surficial and buried drums, storage tanks, containers, their associated contents, and any impacted soils. These drums, storage tanks, and containers are suspected to be either sources or potential sources of contamination.

The following sections of this basis of design describe the removal action by hazardous, toxic, and radiological waste account, as defined by the Remedial Action Delivery Order Requirements Package Guide, NEESA 20.2-062 of June 1992.

BACKGROUND

Marine Corps Base (MCB), Camp Lejeune, North Carolina was placed on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) National Priorities List (NPL) that became effective on October 4, 1989 (54 Federal Register 41015, October 4, 1989). The United States Environmental Protection Agency (USEPA) Region IV, the North Carolina Department of Environment, Health and Natural Resources (NC DEHNR) and the United States Department of the Navy (DoN) then entered into a Federal Facilities Agreement (FFA) for Marine Corps Base, Camp Lejeune. The primary purpose of the FFA was to ensure that environmental impacts associated with past and present activities at the Marine Corps Base were thoroughly investigated and appropriate CERCLA response/ Resource Conservation and Recovery Act (RCRA) corrective action alternatives were developed and implemented as necessary to protect public health and the environment.

OU No. 2 is located approximately 1.75 miles east of the New River and 2 miles south of State Route 24 on the mainside portion of MCB Camp Lejeune. The unit is bordered by Holcomb Boulevard on the west, Sneads Ferry Road on the south, Piney Green Road on the east, and by Wallace Creek on the north. Camp Lejeune Railroad operates rail lines parallel to Holcomb

Boulevard bordering OU No. 2 on the west. OU No. 2 covers an area of approximately 210 acres. OU No. 2 consists of three sites: Sites 6, 9, and 82.

Site 6 is bounded on the north by Site 82, by Piney Green Road on the east, by Site 9 on the south, and by Holcomb Boulevard on the west. Site 6 covers an area of approximately 177 acres that incorporates Storage Lots 201 and 203, the wooded area between the storage lots, and a ravine, which begins at Site 6 and bisects Site 82. Three surface water bodies are associated with Site 6: Wallace Creek, Bear Head Creek, and a ravine located in the wooded area north of Lot 203 that drains to Wallace Creek.

Open Storage Lot 201 (Lot 201) is a fenced lot located in the south-central portion of Site 6. It is a flat area with sparse vegetation around the fence lines. Open Storage Lot 203 (Lot 203) is a fenced lot located in the northern portion of Site 6 covering approximately 46 acres. Lot 203 is a relatively flat area with elevation differences of approximately five feet. The ground surface is comprised of both naturally existing soil and fill material. Lot 203 is bordered by Site 82, Piney Green Road to the east, woods to the south, and by Holcomb Boulevard to the west. Lot 203 is currently inactive.

Approximately 200 drums and containers are present at Site 6. The majority of the drums, if labeled, were identified as containing lubricants, petroleum products, or corrosives. Empty storage tanks are also located at Site 6. They were labeled as containing diesel fuel, gasoline, and kerosene (Baker, 1992).

Woods and open fields surround both Storage Lots 201 and 203 and make up the remaining area of Site 6. The topography of the wooded areas is relatively flat, but localized trenching and mounding is visible just north of Lot 203 and west of Piney Green Road. The wooded areas are randomly littered with debris including spent ammunition casings, and empty or rusted drums. Markings were observed on a few drums (most drums did not contain marking due to their condition and age) located north of Lot 203. These drums were marked as "lubrication oils." Many of the drums observed were only shells or fragments of drums (Baker, 1992).

Site 6 has a long history of various uses including the disposal and storage of wastes and supplies. Lot 203 has been used as a disposal area since the 1940s. There is little documentation on the disposal activities at this lot. Lot 203 in not currently active as a storage or disposal area, but the ground surface is littered with various debris. Lot 203 was also used for the storage and disposal of radio and communication parts, shredded tires,

lubricants, petroleum products, corrosives, expended demolition kit training materials, ordnance, sheet metal debris, wire cables, and wooded pallets.

Lot 203 is currently fenced. From historical photographs, it appears that the fenced boundaries have changed since the lot was in operation.

1.0 MOBILIZATION AND PREPARATORY WORK

Mobilization involves the acquisition, delivery, and setup of equipment, material, and personnel to the work site that are necessary to accomplish the Removal Action scope of work.

2.0 MONITORING, SAMPLING, TESTING, AND ANALYSIS

The Contractor shall submit both a site sampling and analysis plan (SAP) and a work plan describing the Contractor's sampling, analytical, and quality control procedures for the performance of work required under these specifications. The work plan shall include a summary of work to be performed, an Environmental Protection Plan, a Chemical Quality Management Plan (CQMP), the project organization, and any required catalog data. The CQMP shall ensure that all chemical data generated are scientifically accurate and legally defensible. The SAP shall detail sample quantities, acquisition procedures and data collection methods to be employed during the removal action. The type and quantity of testing shall be based on the requirements set forth in the specifications and both the Contractor's health and safety plan (HASP) and air monitoring plan. Additional monitoring, sampling, testing and analyses shall be carried out as required during the project with the approval of the Navy's Technical Representative.

The Contractor shall also submit documentation that certifies testing laboratory qualifications. The testing laboratory must meet the requirements set forth in the Basic Contract and be NEESA certified.

The Contractor shall adhere to all EPA chain-of-custody procedures during the collection, transport, and analyses of all samples. The Contractor will arrange laboratory analyses of all samples to conform with NEESA Level C Quality Assurance Requirements.

3.0 SITE WORK

Site work includes all clearing and grubbing, fencing, roadway and equipment staging area preparation. Clearing and grubbing will be limited to approximately 1.0 acre of the excavation areas. Trees greater than 3 inches in diameter will be cut and stored in the wooded areas.

The excavation access road and equipment staging areas, noted on site plan drawings, shall be covered with crushed gravel.

Fencing construction will include the installation of chain link, silt, and safety fencing.

4.0 (NOT USED)

The current HTRW Work Breakdown Structure has not assigned an account to Section 4.0.

5.0 SURFACE WATER COLLECTION AND CONTROL

No surface water collection and control is anticipated for this project.

6.0 GROUNDWATER COLLECTION AND CONTROL

No groundwater collection and control is anticipated for this project.

7.0 AIR POLLUTION COLLECTION AND CONTROL

Investigations to date have detected evidence of volatile contamination in the northern proposed excavation areas. Therefore, the excavation, transportation, and backfilling activities shall include PID monitoring. Soil, haul roads, and other areas disturbed by operations will be treated with water as a dust suppressant.

8.0 SOLIDS COLLECTION AND CONTAINMENT

The excavation of buried drums and associated contaminated soil will be performed with ordinary earth moving equipment, such as excavators and front-end loaders. Excavation will proceed in such a way as to allow segregation of contaminated and non-contaminated soil.

The areas of contamination to be excavated are primarily based on the results of an aerial photographic investigation conducted by the USEPA's Environmental Photographic Interpretation Center and a remedial investigation completed in March 1993 by Baker Environmental, Inc. The estimated in-place volume of drum-containing trenches is 310 cubic yards, based on 141 linear feet of 10' x 5', 6' or 8' trench, as indicated on the drawings.

Once the Contractor has excavated the specified limits of the trenches, an on-site analysis consisting of a visual inspection will be performed on the surrounding soil. If the visual inspection reveals evidence of additional drums or visually contaminated soil, the Contractor will consult with the Navy's Technical Representative to determine an additional amount of excavation.

The Contractor shall provide a bermed and lined soil containment area, as specified in Section 02220 of the Guideline Technical Specifications. Visually contaminated soil shall be stockpiled separately. Non-contaminated soil shall be stored temporarily, analyzed, certified to be free from contaminants, retrieved, and placed in the trench for use as backfill.

General construction debris encountered in the excavation areas shall be stockpiled for disposal at a North Carolina approved landfill.

9.0 LIQUID, SEDIMENT, AND SLUDGE COLLECTION AND CONTAINMENT

The Contractor shall provide a decontamination pad to collect liquids from the decontamination of personnel and equipment. A separate area designated for the rinsing and decontamination of drums, storage tanks and containers will be provided within the drum containment area. The resulting fluids will be collected in a tank for analysis and proper disposal or treatment.

10.0 DRUMS, TANKS, AND MISCELLANEOUS DEMOLITION AND DISPOSAL

Drum, storage tank, miscellaneous container and associated contaminated soil removal are the only types of removal expected. Above ground storage tanks are to be emptied, removed, cleaned, and decommissioned for scrap. Drums are to be emptied, rinsed, crushed and staged for scrap.

11.0 BIOLOGICAL TREATMENT

No biological treatment is anticipated for this project.

12.0 CHEMICAL TREATMENT

No chemical treatment is anticipated for this project.

13.0 PHYSICAL TREATMENT

No physical treatment is anticipated for this project.

14.0 THERMAL TREATMENT

No thermal treatment is anticipated for this project.

15.0 STABILIZATION, FIXATION, AND ENCAPSULATION

Contaminated soil and debris to be disposed must not contain any free liquids. The Contractor may be required to dry the soil by adding a drying agent such as kiln dust to the excavated material.

16.0 (NOT USED)

The current HRTW Work Breakdown has not assigned an account to Section 16.0.

17.0 DECONTAMINATION AND DECOMMISSIONING

Decontamination and decommissioning are not applicable to this removal action.

18.0 DISPOSAL (OTHER THAN COMMERCIAL)

Non-commercial disposal is not anticipated for this project.

19.0 DISPOSAL (COMMERCIAL)

Contaminated soil will be loaded onto trucks or roll-off containers. The loaded waste will be manifested by a licensed hazardous waste hauler and transported to an approved solid waste landfill, or RCRA Subtitle C hazardous waste landfill if necessary.

Liquids generated through decontamination of drums, storage tanks, and containers shall be containerized, manifested, and transported to an approved treatment facility. Liquids drawn from drum, storage tanks, and containers not previously tested shall be hazard categorized and compatibility tested. Lab analyses shall dictate the necessary method of treatment or disposal. The resulting waste streams shall be manifested and sent to an appropriate disposal or treatment facility.

20.0 SITE RESTORATION

The excavated areas will be backfilled with non-contaminated material from the project site or clean material brought from the borrow area at Camp Lejeune and regraded to the original contours. All excavated areas will be revegetated.

21.0 DEMOBILIZATION

All temporary facilities, equipment, and supplies acquired for this contract will be removed from Navy property.

Submittals shall include: (1) a punch list showing correction of all listed items; (2) a letter from the Contractor certifying completion of all contracted work in accordance with the contract conditions, applicable regulations, and standards of practice; (3) a completed project current condition with an as-built survey for the entire site; (4) submittal, in one collated document, of all quality control daily reports, samples, results of the analysis of the samples, corrective actions (if required, taken to correct unacceptable deviations from required quality standards), results of corrective actions; problems encountered and resolved, and lessons learned; and, (5) submittal in one collated document of all quality assurance samples, results of analysis of the samples, and corrective actions (if required, taken to correct unacceptable deviations from required quality standards).

The Contractor shall submit a detailed report summarizing the removal action, lessons learned, and recommendations for inclusion in future similar contracts.

1.2 ARARs

An ARAR, as defined, is an environmental law, regulation, or guideline that is either "applicable" or "relevant and appropriate" to a remedial action. "Applicable" requirements are those cleanup standards, standards of control, and other environmental protection requirements, criteria, or limitations, promulgated under Federal or State laws that specifically address chemicals/contaminants of concerns, remedial actions, locations of remediation, or other circumstances at a CERCLA-regulated site. "Relevant and appropriate" requirements are those which address problems or situations sufficiently similar to those encountered at a CERCLA-regulated site that their use is well suited to the particular site (Section 121 of CERCLA, 42 U.S.C. Section 9621 and 40 CFR Section 300.68(i)). The Navy intends to comply with CERCLA standards, and the following regulations shall be considered as ARARs for the site.

1.4 GENERAL INTENTION

It is the declared and acknowledged intention and meaning to provide and secure a removal action at Marine Corps Base Camp Lejeune, Site 6, North Carolina, complete and ready for use.

1.5 GENERAL DESCRIPTION

This work includes providing all labor, supervision, tools, materials, equipment and transportation necessary to remove and dispose of drums, containers, above ground storage tanks, and the associated contaminated soils at Site 6, MCB Camp Lejeune. Components of this project include: removal and excavation of drums, containers and soil located on the surface or partially buried at Site 6 in and around Storage Lot 203 and south of Storage Lot 201; backfilling with clean fill; control, collection and disposal of contaminated water and investigation derived wastes (IDW) liquids; transportation and disposal of contaminated material classified as a hazardous waste under RCRA (40 CFR Part 261) in a RCRA Subtitle C landfill; disposal of non-hazardous wastes in an approved solid waste landfill; site restoration; and other related work.

1.6 DESCRIPTION OF CONTAMINANTS PRESENT

Lead and barium were found in test pits GS1960D. A viscous sludge from containers in test pits 6-TP5 and 6-TP6 closely resembled No. 6 fuel oil. Contents from 48 drums/containers were sampled and composited. The results of this sampling event are found at the end of this section of specifications.

1.7 LOCATION

The work shall be located at Site 6 of Operable Unit No. 2, Marine Corps Base Camp Lejeune, near Jacksonville, North Carolina, approximately as shown.

1.8 PROJECT INFORMATION

1.8.1 Drawings, Maps and Specifications

One set of contract drawings, maps and specifications will be furnished to the Contractor without charge, except applicable publications incorporated into the technical provisions by reference. Additional sets will be furnished on request at the cost of reproduction. The work shall conform to the following contract drawings and maps, all of which form a part of these specifications and are available in the office of the Contracting Officer.

EFD Drawing No.	NAVFAC Drawing No.		Title
370690	4270690	T-1	Cover Sheet and General Notes
370691	4270691	C-1	Site Plan - North
370692	4270692	C-2	Site Plan - South
370693	4270693	C-3	Excavation Site Plans
370694	4270694	C-4	Details

1.8.2 Reference Report

The following reference reports are available for examination in the office of the Navy's Technical Representative and is intended only to show the existing conditions. The reports and drawings are the property of the Government and shall not be used for any purpose other than that intended by the specification.

Reports

A. "Draft Remedial Investigation for Operable Unit No. 2 (Sites 6 and 9) Marine Corps Base Camp Lejeune", Baker Environmental, Inc., dated June 1993.

B. "Draft Feasibility Study for Operable Unit No. 2 (Sites 6 and 9) Marine Corps Base Camp Lejeune", Baker Environmental, Inc., dated June 1993.

C. "Draft Proposed Remedial Action Plan for Operable Unit No. 2 (Sites 6 and 9) Marine Corps Base Camp Lejeune", Baker Environmental, Inc., dated June 1993.

1.8.3 Test Pits and Analytical Results

Test pit logs and analytical results from drum and test pit soil sampling prepared by Baker Environmental, Inc. follow this section of these specifications.

1.9 PROJECT SCHEDULE AND TIME CONSTRAINTS

The Contractor shall be required to (a) commence work under this contract within 10 calendar days after the date the Contractor receives the notice to proceed, (b) prosecute the work diligently, and (c) complete the entire work ready for use not later than 180 calendar days after the required notice to proceed. The time stated for completion shall include final cleanup of the premises. The time stated for completion does not include the maintenance period for the seeding of disturbed areas.

1.10 SAFETY PROGRAM

In addition to safety requirements in the Basic Contract, the Contractor shall implement a safety program conforming to the requirements of Federal, state, and local laws, rules and regulations. The program shall include, but is not limited to, the following:

a. Occupational Safety and Health Standards

b. COE EM-385-1-1

c. Contract Clause entitled "Accident Prevention." In this clause, the date of COE EM-385-1-1 should be 1 October 1992.

d. NFPA 241

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 FACILITIES AND SERVICES

The Contractor shall provide all temporary facilities necessary for the proper completion of the work, as necessary and as specified.

3.1.1 Availability of Utilities Services

MCB Camp Lejeune will provide electrical service from a utility pole in Storage Lot 203. It is the responsibility of the Contractor to provide the electrical hook-up and the electric meter. The Contractor shall provide all other utilities.

3.1.2 Contractor's Storage Areas

The clause of the Contract Clauses entitled "Operations and Storage Areas" and the following apply:

3.1.2.1 Storage in Existing Buildings

Storage in existing buildings will not be allowed.

3.1.2.2 Open Site Storage Size and Location

The open site available for storage shall be confined to the areas inside the fenced portion of Storage Lot 203.

3.1.3 Trailers, Storage, and Temporary Buildings

Locate trailers, storage, and temporary buildings where directed and within the indicated operations area. Trailers or storage buildings will be permitted where space is available subject to the approval of the Navy's Technical Representative. The trailers or storage buildings shall be suitably painted and kept in a good state of repair. Failure of the Contractor to maintain the trailers or storage buildings in good condition will be considered sufficient reason to require their removal.

3.1.3.1 Storage and Office Trailers

Trailers must meet state law requirements and must be in good condition.

Trailers shall be lockable and shall be locked when not in use.

Trailers shall have a sign in lower left hand corner of left door of trailer with the following information: company name, address, registration number of trailer or vehicle identification number, location on base, duration of contract or stay on-base, contract number, local on-base phone number, off base phone number of main office, and emergency recall person and phone number.

3.1.4 Cleaning Up

During the progress of the remediation, the work area and adjacent areas shall be kept clean and free of all rubbish, surplus materials, and unneeded construction equipment.

No material or debris shall be allowed to flow or wash into watercourses, ditches, gutters, drains, or pipes.

The Contractor shall remove all temporary buildings and structures built under this contract on or before the completion of the work.

All materials and equipment installed by the Contractor or any subcontractors shall be thoroughly clean, and on completion of the work shall deliver it undamaged and in fresh and new-appearing condition.

The Contractor shall restore or replace, when and as directed by the Navy's Technical Representative, any property damaged by the contract work and equipment or by employees. The property shall be restored in a condition at least equal to that existing prior to the beginning of construction operations. Suitable materials, equipment, and methods shall be used for such restoration. The restoration of property shall be done promptly and shall not be left until the end of the contract period.

3.2 RESTRICTIONS ON OPERATIONS

3.2.1 Scheduling

The Contractor shall schedule the work as to cause the least amount of interference with station operations. Work schedules shall be subject to the approval of the Officer in Charge of Construction. Permission to interrupt station roads shall be requested in writing a minimum of 15 calendar days prior to the desired date of interruption.

3.2.2 Regular Work Hours

The regular work hours for MCB Camp Lejeune are 0645 to 1615.

3.2.3 Work Outside Regular Hours

If the Contractor desires to carry on work outside regular hours or on Saturdays, Sundays, or holidays, the Contractor shall submit an application to the Officer in Charge of Construction two days prior to the scheduled working date. The Contractor shall allow ample time to enable satisfactory arrangements to be made by the Government for inspecting the work in progress. At night, the Contractor shall light the different parts of the work in an approved manner.

3.2.4 Security Requirements

No employee or representative of the Contractor will be admitted to the work site without satisfactory proof of United States citizenship.

3.2.4.1 Extraordinary Security Requirements

The clause of the Contract Clauses entitled "Identification of Employees" and the following apply:

a. Equipment Markings: Equipment owned or rented by the company will have the company name painted or stenciled on the equipment in a conspicuous location. Rented equipment is to be conspicuously marked with a tag showing who rented it.

3.2.5 Restrictions On Equipment

3.2.5.1 Radio Transmitter Restrictions

The Contractor shall conform to the restrictions and procedures for the use of radio transmitting equipment, as directed by the Navy's Technical Representative. Do not use transmitters without prior approval.

3.3 ACTIONS REQUIRED OF THE CONTRACTOR

3.3.1 Location of Underground Facilities

The Contractor shall verify the elevation and location of existing piping, utilities, and any type of underground obstruction not indicated or specified to be removed but indicated in locations to be traversed during excavation. MCB Camp Lejeune Base Maintenance may provide utility location. Base Maintenance must be contacted two days prior to commencement of excavation.

3.3.2 Station Permits

The Contractor shall obtain station permits pursuant to paragraph entitled "Station Regulations." Permits are required for, but not necessarily limited to, welding and digging. Burning will not be permitted. The Contractor shall allow 7 calendar days for processing of the applications.

3.3.3 Storm Protection

If a warning of gale force winds is issued, take precautions to minimize any danger to persons, and protect the work and any nearby Government property. Precautions shall include, but are not limited to, closing openings; removing loose materials, tools and equipment from exposed locations; and removing or securing scaffolding and other temporary work. Close openings in the work if storms of lesser intensity pose a threat to the work or any nearby Government property.

3.4 PUBLIC RELEASE OF INFORMATION

a. The Contractor shall not publicly disclose any information concerning any aspect of the materials or services related to this delivery order without the prior written approval of the Navy's Technical Representative.

b. The Contractor shall insert the substance of clause "(a)" of this paragraph in each subcontract and purchase order relating to the

project.

3.5 SUBMITTALS FROM BASIC CONTRACT

3.5.1 As-Built Records

Maintain one sepia and three sets of full size as-built drawings in accordance with the Basic Contract Section 6.11.5 "As-Builts." Upon completion of the project submit the certified drawings to the Navy's Technical Representative.

3.5.2 Site Health and Safety Plan

Within 20 days of issue delivery order, prepare and submit to the Navy's Technical Representative a Site Health and Safety Plan which complies with the Basic Contract Part 3.0 "Health and Safety."

3.5.3 Sampling and Analysis Plan

Within 20 days of issue delivery order, prepare and submit to the Navy's Technical Representative a Sampling and Analysis Plan in accordance with 40 CFR 300.415 (b)(4)(ii), describing all sampling and analyses proposed for the intended work to be approved by the Navy's Technical Representative. The Sampling and Analysis Plan shall consist of two parts: the field sampling plan and the quality assurance project plan.

3.5.4 Construction Schedule

Within 20 days of issue delivery order, prepare and submit to the Navy's Technical Representative a schedule showing the proposed start and finish dates of all portions of the proposed construction.

3.5.5 Work Plan

Within 20 days of issue delivery order, prepare and submit a Work Plan which includes the following sections: Summary of Work, the tasks to be performed, a task breakdown, the project organization, an Environmental Protection Plan, a Chemical Quality Management Plan and required catalog data.

3.5.6 Status Reports

All status reports shall comply with the Delivery Order # 0001. Submit a Technical Progress Report, Cost Performance Report, Modification Log, Time-Scaled Logic Diagram, Government Materials Tracking Report, Variance Analysis Report, and Waste Materials Report. Submit the first delivery order status report approximately 30 days after issuance of the delivery order. Thereafter, submit status reports every 30 days. Status report periods shall be consistent with the invoice reporting periods.

3.5.7 CQC Plan Addenda

Within 20 days of issuance of the delivery order, submit a CQC Plan Addenda which complies with Part 6 of the Basic Contract.

3.5.8 Testing Laboratory Qualification

Within 15 days of issuance of the delivery order, submit Qualifications of each Laboratory which will be used. This submittal must comply with Part 6 of the Basic Contract.

3.5.9 Test Results Summary Report

A summary report of all field tests containing both "required" and "actual" results plus "passed" or "failed" for conforming, non-conforming and repeating test results shall be submitted to the Navy's Technical Representative at the end of each month in accordance with Section 6.10.1 of the Basic Contract.

3.5.10 Daily Report to Inspector (DRI)

The DRI shall be prepared and submitted daily to the Navy's Technical Representative in accordance with Section 6.11.1 of the Basic Contract.

3.5.11 Submittal Status Log

The CQC Representative shall submit a completed Submittal Status Log to document quality control for materials, inspection and testing in accordance with Part 6.0 of the Basic Contract.

3.5.12 Permits

Within 20 days of issuance of the delivery order, submit draft copies of the following permits required for on-site activities:

a. Excavation Permit; from the Public Works Officer, Utilities Division

b. Hot Works Permit; from the Public Works Officer, Utilities Division

3.5.13 Contractor's Closeout Report

Submit upon completion of the project. This report shall include: Introduction, Summary of Action, Final Health and Safety Report, Summary of Record Documents, Field Changes and Contract Modification, Final Documents, Summary of Chemical and Geotechnical Testing, Offsite Disposition of Materials, and QC Summary Report.

3.6 REQUIRED INSURANCE

3.6.1 Minimum Coverage

The Contractor shall procure and maintain during the entire period of performance under this contract the following minimum insurance cover:

Type of Insurance	Per Person	Per Occurrence	Property per Occurrence
1. Comprehensive Gen'l Liability		$500,000	

2. Automobile Liability	$200,000	$500,000	$20,000

3. Workmen's Compensation: As required by Federal and State Workmen's compensation and occupational disease statutes.

4. Employer's Liability Coverage: $100,000 except in states where workmen's compensation may not be written by private carrier.

5. Other: As required by state law.

3.6.2 Insurance - Work on a Government Installation (Sept 1989)

3.6.2.1 General Requirements

The Contractor shall, at its own expense, provide and maintain during the entire performance period of this contract the minimum amounts of insurance required in the Schedule or elsewhere in the contract.

3.6.2.2 Insurance Certification

Before commencing work under this contract, the Contractor shall certify to the Navy's Technical Representative in writing that the required insurance has been obtained. The policies evidencing required insurance shall contain an endorsement to the effect that any cancellation or any material change adversely affecting the Government's interest shall not be effective (1) for such period as the laws of the State in which this contract is to be performed prescribe or (2) until 30 days after the insurer or the Contractor gives written notice to the Navy's Technical Representative, whichever period is longer.

3.6.2.3 Notification

The Contractor shall insert the substance of this clause, including this paragraph, in subcontracts under this contract that require work on a Government installation and shall require subcontractors to provide and maintain the insurance required in the Schedule or elsewhere in the contract. The Contractor shall maintain a copy of all subcontractor's proof of required insurance, and shall make copies available to the Navy's Technical Representative upon request (FAR 52,228-5).

CORPORATION

"Analytical Chemistry for Environmental Management"

March 17, 1993

Mr. Matthew D. Bartman
Baker Environmental
420 Rouser Road
Coraopolis, PA 15108

Dear Mr. Bartman:

The results of our analysis of sample 6-TP5GR-02 indicate the sample is a petroleum hydrocarbon product that closely matches #6 fuel oil. The sample readily dissolves in freon-113 and methylene chloride.

Analysis by scanning infrared spectroscopy shows the sample exhibits carbon-hydrogen bonding typical of petroleum hydrocarbons. No other functional groups were detected by scanning IR analysis.

Analysis by gas chromatography using flame ionization detection showed the chromatogram of sample 6-TPGR-02 exhibits an unresolved complex mixture with a pattern that most closely matches #6 fuel oil.

The concentration of #6 fuel oil in sample 6-TPGR-02 is 100%.

If you have any questions regarding our findings please don't hesitate to call us.

Sincerely,

Henry Leibovitz
GC Laboratory
Manager

HL/ll

Summary of Compatibility Analyses

SUMMARY OF COMPATIBILITY ANALYSES

BATCH NO. 6-B01

Base Neutral Liquid with Solids #1

Water soluble
pH = 5.0

D004, D024, D031, D044, D047, D062, D010-(no solids)

BATCH NO. 6-B02

Base Neutral Liquid with Solids #2

Water Soluble
pH = 6.0

D002, D009, D017, D032, D033, D034, D008-(oil w/water)

BATCH NO. 6-B03

Base Neutral Liquid with Solids #3

Water soluble
pH = 6-7

D005, D006, D007, D040, D057, D060, D011-(oil w/water)

BATCH NO. 6-B04

Base Neutral Liquid #1

Water Soluble
pH = 5-7

D003, D016, D018, D022, D025, D037, D042

BATCH NO. 6-B05

Combustible Liquid #1

Hexane and Water Soluble
pH = 4
100-200°F

D001, D027, D038, D039, D041, D043

BATCH NO. 6-B06

Flammable Liquid #1

Hexane Soluble
pH = 5
70-140°F

D012, D014, D015, D050, D052

BATCH NO. 6-B07

Combustible Liquid #2

Hexane Soluble
pH = 4
100-200°F

D013, D051, D053

BATCH NO. 6-B08

Flammable Solid #1

Hexane Soluble
pH = 5
< 70°F

D054, D061

BATCH NO. 6-B09

Corrosive Solid #1

pH = 12
> 180°F

D063

BATCH NO. 6-B10

Corrosive Solid #2

pH = 13
> 180°F
Strong oxidizer and sulfide

D055

BATCH NO. 6-B11

Base Neutral Solid #1

pH = 3
> 180°F

D056, D058

WASTE SAMPLING REQUIREMENTS

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY (USEPA)

EPA/540/P-91/008	Compendium of ERT Waste Sampling Procedures, 1991

1.2 SUBMITTALS

a. Sample Log

b. Contractor Generated Waste Sample Analysis Results

c. Government Generated Waste Sample Analysis Results

1.3 DEFINITIONS

1.3.1 Contractor Generated Wastes

Contractor generated wastes shall include all materials which become contaminated during the course of contract work and wastes generated during the contract work.

1.3.2 Government Generated Wastes

Government generated wastes shall include all impacted soils and drum, storage tank, and container contents existing at Site 6 prior to the commencement of contract work.

1.3.3 Confirmation Sampling

Confirmation sampling shall include all sampling conducted in the open excavations during the post-removal stage to confirm the removal of all contaminated soil.

1.3.4 Waste Characterization Sampling

Waste characterization sampling shall include the collection of wastes generated during the removal action. This sampling is conducted to determine the hazardous nature of the wastes, and the subsequent handling and disposal of the wastes.

1.4 DESCRIPTION OF WORK

1.4.1 Excavation Sampling Requirements

Collect environmental samples from each contractor generated waste stream to determine applicable transportation and disposal requirements.

1.4.2 Government Generated Waste

Collect environmental samples from each government generated waste stream to determine applicable transportation and disposal requirements. Environmental sample analyses will not be required for those composite samples collected during the previous investigations.

1.5 QUALITY ASSURANCE

1.5.1 Waste Sampling

Adhere to all sample acquisition, handling, custody documentation, decontamination, and quality assurance/quality control (QA/QC) requirements and procedures as required by federal, state and local regulations.

1.5.2 Analytical Laboratory

The Contractor will be solely responsible for the execution and accuracy of the waste stream analyses. All analytical standard methods shall meet, at a minimum, Naval Energy and Environmental Support Activity (NEESA) QA/QC Level D requirements for confirmation sampling and Level C requirements for waste characterization sampling and shall also be in accordance with federal, local and state regulations.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

3.1 GENERAL

Supply all personnel, equipment, and facilities to collect and analyze the environmental samples required to characterize the wastes.

3.1.1 Sample Acquisition

Sampling procedures shall be consistent with NEESA Guidelines.

3.1.1.1 Confirmation Samples

Confirmation samples shall be collected in the walls and the bottom of the open excavations. One sample from the bottom and the walls of the excavation shall be collected for every 25 linear feet of excavation.

Confirmation samples shall be analyzed for TCLP and RCRA hazardous characteristics using the following SW-846 Methods: TCLP Extraction - SW 1311, TCLP VOA - SW 8240, TCLP SVOA - SW 8270, TCLP Pesticides - SW 8080, TCLP Herbicides - SW 8150, TCLP Metals SW 6010, Ignitability - SW 1010, Corrosivity(pH) - SW 9045, Reactivity (Cyanide) - SW 9012, and Reactivity

(Sulfide) - SW 9030.

3.1.1.2 Waste Characterization Samples

Characterization samples shall be composite soil samples collected for environmental analysis. One sample shall be collected for every 100 cubic yards of soil excavated. Characterization samples shall also be conducted on unidentified materials encountered during this removal action.

Waste characterization samples shall be analyzed for TCL organics/TAL inorganics characteristics in accordance with EPA CLP/SOW.

3.1.2 Sample Handling

Sampling, sample handling, and sampling containers must be consistent with the chemicals expected, the matrix of the sample, and planned analytical procedures. Precleaned glass sample containers with teflon lids are required.

The Contractor shall describe in the Sampling and Analysis Plan strict chain-of-custody procedures to be used during collection, transport, and analysis of all samples.

3.1.3 Sampling Documentation

Maintain a sample log containing, at a minimum, the following information:

a. Date and Time of Sampling

b. Sample Locations

c. Sample Matrix

d. Sample Identification Number

e. QA/QC Sample Identification

f. Analyses to be Performed

g. Type and Number of Sample Containers

h. Signatures of Individuals Performing Sampling

-- End of Section --

SECTION 01561

EROSION AND SEDIMENT CONTROL

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

FEDERAL SPECIFICATIONS (FS)

FS O-F-241 (Rev. D)	Fertilizers; Mixed, Commercial

U.S. ARMY CORPS OF ENGINEERS (CW) PUBLICATIONS

CW 02215	1977 Plastic Filter Fabric

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

ASTM D1682	1964 (Rev. 1985) Breaking Load and Elongation of Textile Fabrics
ASTM D3786	1987 Hydraulic Bursting Strength of Knitted Bursting Strength Tester Method

NORTH CAROLINA DEPARTMENT OF NATURAL RESOURCES

NCESCPDM	1988 North Carolina Erosion and Sediment Control Planning and Design Manual

NORTH CAROLINA DEPARTMENT OF TRANSPORTATION

NCDOT SSRS	1990 Standard Specifications for Roads and Structures

1.2 DESCRIPTION OF WORK

The work includes the provision of the temporary erosion control measures, to prevent the pollution of water and land within and adjacent to the project limits. Coordination of the installation of temporary erosion control devices shall ensure effective and continuous control of erosion and pollution. Provide and maintain erosion control measures in accordance with the North Carolina Department of Natural Resources Erosion and Sediment Control Manual.

1.3 SUBMITTALS

Submit the following in accordance with Attachment 7 of the Basic Contract.

1.3.1 SD-02, Manufacturer's Catalog Data

a. Silt Fence

1.3.2 SD-04, Drawings

a. Erosion Control Plan G

Submit, for approval, four copies of a Contractor furnished erosion and sediment control plan to the Navy's Technical Representative, a minimum of 14 days prior to start of construction. The plans shall not be a reproduction of the contract documents. The erosion and sediment control plan shall indicate minimum erosion control requirements and shall be site adapted and modified to suit the sequence of construction operations. As a minimum, the Contractor furnished erosion and sediment control plan shall indicate the following:

a. Clearing limits

b. Type, size, and location of temporary erosion control features

PART 2 PRODUCTS

2.1 SILT FENCE

2.1.1 Posts

4 inch by 4 inch wood posts, minimum 3 inch diameter wood, or 1.33 pound per linear foot steel posts. Posts shall be a minimum of 6 feet long.

2.1.2 Wire Fabric

ASTM A185, 6 by 6 minimum 12-1/2 gage.

2.1.3 Filter Fabric

A woven or nonwoven polypropylene, nylon, or polyester containing stabilizers and/or inhibitors to make the fabric resistant to deterioration from ultraviolet, and with the following properties:

a.	Minimum grab tensile strength (ASTM D1682)	100 pounds
b.	Minimum grab elongation (ASTM D1682)	25 percent
c.	Minimum mullen burst strength (ASTM D3786)	210 psi
d.	E.O.S. (CW 02215)	20-100

2.1.4 Standard Catalog Product

A Manufacturer's standard catalog product for a preassembled sediment fence may be provided in lieu of the indicated sediment fence except that the filter fabric shall be as specified, and the height of the structure shall be as indicated.

2.2 GRAVEL FOR CONSTRUCTION ENTRANCE

NCDOT SSRS, Section 520.

2.3 GEOTEXTILE FOR CONSTRUCTION ENTRANCE

NCDOT SSRS, Section 1056.

2.4 WATER FOR DUST SUPRESSION

Water used for dust supression shall be free from oil, acids, alkalis, salts, or any other substance that is toxic or otherwise harmful to surrounding vegetation.

PART 3 EXECUTION

3.1 SILT FENCE

Install posts a maximum of 6 feet on center, and at an angle between 2 degrees and 20 degrees towards the potential silt load area. Do not attach filter fabric to existing trees or structures. Secure filter fabric to the post and wire fabric using staples, tie wire, or hog rings. Imbed the filter fabric into the ground as indicated. Splice filter fabric at support pole using a 6 inch overlap and securely seal. Overlap or reinforce the top edge of the filter fabric a minimum of 1 inch.

The silt fence shall be installed, at a minimum, at the locations shown on the construction drawings.

3.2 GRAVEL CONSTRUCTION ENTRANCE

Place geotextile on top of graded existing soil where construction entrances and access roads are to be constructed. Place gravel on top of geotextile to a minimum of 6 inches thick, at points of vehicular ingress and egress as indicated.

3.3 DUST SUPPRESSOR

Apply water as a dust suppressor on unsurfaced travel ways. Repeat water applications as necessary to control dust emissions.

3.4 MAINTENANCE AND INSPECTION

Inspect erosion control devices after each rainfall and daily during prolonged rainfall. Remove sediment deposits after each rainfall or when sediment reaches approximately one-half the barrier height. Immediately repair damaged erosion control devices and damaged areas around and underneath the devices. Maintain erosion control devices to assure continued performance of their intended function. Modify the Contractor furnished erosion control plan as required to control problem areas notices after each inspection.

3.5 CLEAN UP

At the completion of the job, or when directed or approved by the Navy's Technical Representative, erosion control devices shall be removed. Erosion control devices and areas immediately adjacent to the device shall be filled (where applicable), shaped to drain and to blend into the surrounding contours. Erosion control devices may remain in place when approved by the Navy's Technical Representative.

-- End of Section --

SECTION 02220

EXCAVATION, FILLING, AND BACKFILLING

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only. All applicable references of other sections of this specification shall also apply to this section.

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

ASTM C 136	1984 (Rev. A) Sieve Analysis of Fine and Coarse Aggregates

COMMERCIAL ITEM DESCRIPTIONS (CID)

CID A-A-1909	Fertilizer

CORPS OF ENGINEERS (COE)

COE EM-385-1-1	1992 Safety and Health Requirements Manual

1.2 DEFINITIONS

1.2.1 Cohesive Materials

Materials ASTM D 2487 classified as GC, SC, ML, CL, MH, and CH. Materials classified as GM and SM will be identified as cohesive only when the fines have a plasticity index greater than zero.

1.2.2 Cohesionless Materials

Materials ASTM D 2487 classified as GW, GP, SW, and SP. Materials classified as GM and SM will be identified as cohesionless only when the fines have a plasticity index of zero.

1.3 SUBMITTALS

Submit the following in accordance with Section 7 of the Basic Contract.

1.3.1 SD-11, Factory Test Reports

Provide certification that imported material is free of contamination.

1.3.2 SD-12, Field Test Reports

Provide field and laboratory confirmatory samples for soil contamination, as necessary.

PART 2 PRODUCTS

2.1 SOIL MATERIALS

Free of debris, roots, wood, scrap material, vegetation, refuse, soft unsound particles, and deleterious, or objectionable materials. Unless specified otherwise, the maximum particle diameter shall be one-half the lift thickness at the intended location.

2.1.1 Common Fill

Approved, unclassified soil material with the characteristics required to compact to the soil density specified for the intended location.

2.1.2 Backfill and Fill Material

ASTM D 2487, classification GW, GP, GM, GC, SW, SP, SM, SC with a maximum ASTM D 4318 liquid limit of 35 maximum ASTM D 4318 plasticity index of 12 and a maximum of 25 percent by weight passing ASTM D 1140, No. 200 sieve. Base borrow material may also be used. The borrow area is indicated on the drawings.

2.1.3 Topsoil

Natural, friable soil representative of productive, well-drained soils in the area, free of subsoil, stumps, rocks larger than one inch diameter, brush, weeds, toxic substances, and other material detrimental to plant growth. Amend topsoil pH range to obtain a pH of 5.5 to 7.

2.2 IMPORTED MATERIAL

All imported materials required to accomplish the work under these Contract Documents are subject to the following requirements:

a. The Contractor must certify that all imported material is free from contamination. Certification shall be submitted to the Navy's Technical Representative. The source of all imported soil materials must be approved by the Government. Representative samples of imported soil materials must not be hazardous by definition or specific listing under Resource Conservation Recovery Act (RCRA) or Toxic Substance Control Act (TSCA) regulations. The frequency, type, and number of tests and detection limits for analysis of hazardous constituents shall be proposed by the Contractor for approval by the Government.

b. All tests necessary for the Contractor to locate an acceptable source of imported material shall be make by the Contractor. Certification that the material conforms to the specification requirements along with copies of the test results from a qualified commercial testing laboratory shall be submitted to the Navy's Technical Representative for approval at least 10 days before the material is required for use. Samples shall be representative and be clearly marked to show the source of the material and the intended use on the project. Sampling of the material source shall be done by the Contractor in accordance with ASTM D75. The Contractor shall notify the Navy's Technical Representative at least 24 hours prior to sampling. The Navy's Technical Representative may at the Navy's Technical Representative's option, observe the sampling procedures. Tentative acceptance of the material source shall be based on an inspection of the source by the Navy's Technical Representative and/or the certified test results submitted by the Contractor to the Navy's Technical Representative at the Navy's Technical Representative's discretion. No imported materials shall be delivered to the site until the proposed source and material tests have been tentatively accepted in writing by the Navy's Technical Representative. Final acceptance will be based on tests make on samples of material taken from the completed and compacted course. All testing for final acceptance shall be performed by the Navy's Technical Representative.

c. If tests conducted by the Contractor or the Navy's Technical Representative indicate that the material does not meet specification requirements, material placement will be terminated until corrective measures are taken. Material which does not conform to the specification requirements and is placed in the work shall be removed and replaced at the Contractor's expense.

2.3 BORROW

Obtain borrow materials required in excess of those furnished from excavations from the borrow area on MCB Camp Lejeune as indicated.

2.4 POLYETHYLENE SHEETING

ASTM D 4397.

PART 3 EXECUTION

3.1 SITE SAFETY AND SECURITY

3.1.1 Ordnance Survey

Conduct an ordnance survey of all areas scheduled for excavation prior to beginning any earthmoving activities. Ordnance personnel shall remain on-site during all excavation activities.

3.1.2 Gate

A chain link gate shall be placed at the northeast corner of Lot 203, as indicated, to restrict access to the removal areas.

3.2 SURFACE PREPARATION

3.2.1 Clearing and Grubbing

Unless indicated otherwise, remove trees, stumps, logs, shrubs, and brush within the excavation limits. Remove stumps entirely. Grub out matted roots and roots over 2 inches in diameter to at least 18 inches below existing surface. Felled trees may be stacked neatly outside the perimeter of the excavation in the wooded areas.

3.2.2 Unsuitable Material

Remove vegetation, debris, decayed vegetable matter, sod, mulch, and rubbish from excavation areas.

3.3 PROTECTION

3.3.1 Site Drainage

Provide for the collection and disposal of surface and subsurface water encountered during construction.

3.3.1.1 Surface Drainage

So that construction operations progress successfully, completely drain construction site during periods of construction to keep soil materials sufficiently dry. Provide temporary ditches, swales, and other drainage features and equipment as required to maintain dry soils. When unsuitable working platforms for equipment operation and unsuitable soil support for subsequent construction features develop, remove unsuitable material and provide new soil material as specified herein.

3.3.2 Underground Utilities

Location of the existing utilities indicated is approximate. The Contractor shall physically verify the location and elevation of the existing utilities indicated prior to starting construction.

3.4 GENERAL EXCAVATION

Excavate to contours, elevation, and dimensions indicated on the construction drawings. Keep excavations free from water. Excavate soil disturbed or weakened by Contractor's operations, soils softened or made unsuitable for subsequent construction due to exposure to weather. Backfill and compact to 85 percent of ASTM D 698 maximum density. Unless specified otherwise, backfill excavations cut below indicated depth and compact to 85 percent of ASTM D 698 maximum density.

3.5 EXCAVATION OF CONTAMINATED MATERIALS

3.5.1 Materials and Equipment

3.5.1.1 General

Provide all labor, materials, and equipment necessary to accomplish the work specified in these paragraphs.

3.5.1.2 Unclassified Excavation

Excavation is unclassified. All excavation shall be completed regardless of the type, nature, or condition of the materials encountered.

3.5.2 Limits of Excavation

a. Begin the excavations with standard machinery. The Contractor shall manually complete the excavation of drums and containers after they are discovered by mechanical equipment to prevent puncturing or further damaging to the drums and containers. The stained soil area under the 55-gallon aboveground storage tank in Area B, as indicated, shall be excavated with standard mechanical equipment.

b. Remove any stained soils and the surrounding one feet of soil encountered during the excavation. Excavations shall be to the depths shown on the construction drawings or until the soils from the limits of the excavations pass TCLP analysis. A 48 to 72 hour turnaround time shall be required to prevent the excavations from remaining for extended periods of time. All soils removed shall be placed in the appropriate stockpiles.

c. If the integrity of an excavated drum or container is sound and no visible indications of leakage are apparent, the drum or container shall be removed with no additional excavation required.

d. Once the Contractor has excavated the areas to the depths shown on the drawings, the Contractor shall conduct an on-site analysis of the excavation consisting of a visual inspection coupled with field

screening equipment to assess organic vapors.

e. Final excavation areas shall be governed by field conditions and determined by the Navy's Technical Representative.

f. Remove, segregate, and stockpile all debris such as metal, wood, and building materials uncovered during the excavation for proper disposal.

g. Construct a small berm around the top perimeter of the excavation areas to prevent surface waters from entering the pits. Remove and contain any ponded water collected in the excavations.

h. If a rupture occurs during the excavation or moving process; collect, contain, and overpack the spilled drum contents and the affected soil.

i. Provide temporary containment areas at the locations indicated. Cover the containment areas with 40 mil polyethylene sheeting. Place excavated contaminated soil or the drums to be disposed of on the impervious barrier and cover with 40 mil polyethylene sheeting. Provide a compacted soil berm around the outer limits of the containment areas and cover with polyethylene sheeting. Secure the edges of the sheeting as indicated.

j. Transfer all drums, containers, debris and soil to the designated storage areas for processing and disposal.

k. Contaminated materials shall be loaded into covered containers or vehicles designed to transport such materials without spillage. Care shall be taken during loading operations to minimize the potential for spillage, tracking, or other means of deposition of contaminated materials outside the work area. Contaminated materials which become spilled on roads, street, or other areas outside the limits of excavation during the loading operation shall be immediately reported to the Navy's Technical Representative, and immediately cleaned up to the satisfaction of the Navy's Technical Representative.

l. Backfilling of excavated areas will begin only after the approval of the Navy's Technical Representative.

m. The Contractor and the Navy's Technical Representative shall work together closely to coordinate excavation, sampling, and analyses to minimize downtime. The Contractor shall schedule work to minimize downtime.

3.5.3 Method of Measurement

a. The solid wastes shall be separated according to their final disposal requirements. The quantity of work done under this paragraph will be measured in tons of "Excavation" which shall be the actual weight of the solid waste removed.

b. No separate measurements will be made for control of water, protection of obstructions, or other work associated with the excavation and loading of materials at the site. These tasks are considered to be incidental to and part of the work specified.

3.5.4 Temporary Containment of Contaminated Material

Provide temporary containment area at location indicated by the Contracting Officer. Cover the containment area with 40 mil polyethylene sheeting. Place excavated contaminated soil on the impervious barrier and cover with 40 mil polyethylene sheeting. Provide soil berm around the outer limits of the containment area and cover with polyethylene sheets. Secure edges of sheets to keep polyethylene sheeting in place.

3.5.5 Loading of Excavated Materials

Contaminated materials shall be loaded into covered containers or vehicles designed to transport such materials without spillage. Care shall be taken during loading operations to minimize the potential for spillage, tracking, or other means of deposition of contaminated materials outside the work area. Contaminated materials which become spilled on roads, streets, or other areas outside the limits of excavation during the loading operation shall be immediately reported to the Contracting Officer, and immediately cleaned up to the satisfaction of the Contracting Officer.

3.5.6 Control of Dust

Dust control measures shall be in accordance with Section C, paragraph 4.12 of the Basic Contract. Keep dust down at all times, including during nonworking periods. Sprinkle or treat the soil at the site, haul roads, and other areas disturbed by operations with dust suppressants such as water. Dry brooming will not be permitted.

3.6 FILLING AND BACKFILLING

Fill and backfill to contours, elevations, and dimensions indicated. Compact each lift before placing overlaying lift.

3.6.1 Fill Placement

Provide for general site. Fill may be obtained from the borrow area located approximately three miles from Storage Lot 203, as indicated. Place in 2-foot lifts. Compact areas not accessible to rollers or compactors with mechanical hand tampers. Aerate material excessively moistened by rain to a satisfactory moisture content. Finish to a smooth surface by blading, rolling with a smooth roller, or both.

3.6.2 Method of Measurement

a. The quantity of work done under this paragraph will be measured in cubic yards of "Replacement of Soil and Site Restoration" which shall consist of the volume of backfill actually placed back into the excavations at the site as specified herein.

b. No separate measurement will be made for grading or finishing the

site. These tasks are considered to be incidental to and part of the work specified for "Replacement of Soil and Site Restoration."

3.7 COMPACTION

Expressed as a percentage of maximum density. Determine in-place density of existing subgrade; if required density exists, no compaction of existing subgrade will be required.

3.7.1 General Site

Compact under neath areas designated for vegetation by routing heavy machinery over the backfill area for three passes for each lift of backfill.

3.8 FINISH OPERATIONS

3.8.1 General Site

Compact underneath areas designated for vegetation by routing heavy machinery over the backfill area for three passes for each lift of backfill.

3.8 FINISH OPERATIONS

3.8.1 Grading

Finish grades to within one-tenth of one foot of existing surrounding contours. For existing grades that will remain but which were disturbed by Contractor's operations, return to original grade.

3.8.2 Seed

Scarify existing grade. Seed shall match existing vegetation. Provide seed at 5 pounds per 1000 square feet. Provide CID A-A-1909, Type I, Class 2, 10-10-10 analysis fertilizer at 25 pounds per 1000 square feet. Provide mulch and water to establish an acceptable stand of grass.

3.8.3 Protection of Surfaces

Protect newly graded areas from traffic, erosion, and settlements that may occur. Repair or reestablish damaged grades, elevations, or slopes.

3.9 DISPOSITION OF SURPLUS MATERIALS

Remove from Government property surplus or other soil material not required or suitable for filling or backfilling, and brush, refuse, stumps, roots, and timber.

-- End of Section --

SECTION 02223

TRANSPORTATION AND DISPOSAL OF CONTAMINATED MATERIAL

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

1.1.1 Code of Federal Regulations:

40 CFR Parts 260 to 280
49 CFR Parts 100 to 180

1.2 SUBMITTALS

1.2.1 Documentation

Provide the Navy's Technical Representative with the following decontamination, transportation and disposal documentation:

a. Written verification that the proposed disposal site is permitted to accept the contaminated materials specified, prior to the start of excavation. All treatment and disposal facilities shall be identified. Permitting and licensing information shall be provided for each facility along with a contact person, address, and a telephone number. The specific waste types to be treated and disposed must be clearly identified.

b. Copies of manifests and other documentation required for shipment of waste materials within 24 hours after removal of waste from the site.

c. Verification that the wastes were actually delivered and disposed of at the disposal site, within 7 days of disposal.

d. Verification that all vehicles and containers were decontaminated prior to leaving the disposal site, within 3 days of disposal.

e. Verification that all vehicles and containers were decontaminated prior to leaving Site 6, were properly operating, and were covered, within 24 hours after removal of waste from the site.

1.3 DEFINITIONS

The following definitions shall apply, in addition to the definitions for the various waste types described in Part 4 of the Basic Contract.

1.3.1 Government Generated Waste

Government generated waste shall include all contaminated soils, drums and containers, storage tanks, debris and container contents existing at the

site prior to the commencement of contract work.

1.3.2 Contractor Generated Waste

Contractor generated waste shall include all materials which become contaminated with wastes as defined in the Basic Contract as a result of Contractor activity at the site after the commencement of contract work.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 GENERAL

3.1.1 Materials and Equipment

Furnish all labor, materials, and equipment necessary to transport and dispose of contaminated soils, drums, tanks, contaminated materials, and overpack drum contents in accordance with applicable Federal, State, and local requirements.

3.1.2 Waste Disposal

3.1.2.1 Processing Sampling Wastes

Wastes generated during hazard characterization and compatibility testing, which shall include but not be limited to, all surplus samples, glass jars, sampling devices, and chemical materials, shall be packed in overpack drums and labeled for off-site disposal.

3.1.2.2 Processing Empty Drums and Containers

All empty drums and containers shall be triple-rinsed in accordance with federal, state, and local requirements. Empty drums shall then be crushed and staged for disposal or recycling.

3.1.2.3 Processing Empty Storage Tanks

All empty storage tanks shall be thoroughly rinsed and cleaned in accordance with federal, state, and local requirements. All potentially flammable or combustible sludges, residues and vapors shall be removed or their effects mitigated prior to decommissioning the storage tank. The Contractor shall stage the resulting scrap metal for disposal or recycling.

3.1.2.4 Processing Rinsate Solutions

Containerize in compatible drums all rinsate solutions for sampling and disposal. The drums containing rinsate solution shall be placed in the final staging area.

If an empty drum, storage tank, or container has an oil-based residue, it shall be triple-rinsed with high pressure water or steam. The decontamination fluids shall be containerized separately and placed in the

final staging area for preparation for disposal.

3.1.3 Transportation and Disposal Records

Provide and prepare all waste shipment records/manifests for hazardous and nonhazardous wastes, required by the Resource Conservation and Recovery Act (RCRA) and the U.S. Department of Transportation (DOT). The Contractor shall complete all labels, profile sheets, and disposal restriction forms as necessary, including all DOT, USEPA, and state classifications. The Contractor shall provide a 48 hour notification to MCB Environmental Management Division for required signatures on waste manifests. Following completion of all paperwork, the Contractor shall submit this material and supporting documentation to the Navy's Technical Representative.

3.1.4 Transportation

The Contractor shall be solely responsible for complying with all federal, state, and local requirements for transporting hazardous materials through the applicable jurisdictions and shall bear all responsibility and cost for any noncompliance. In addition to those requirements, the Contractor shall do the following:

a. The Contractor shall weigh all containers for disposal prior to leaving MCB Camp Lejeune. The Contractor may use MCB landfill scales if the scales operator is provided with a 24 hour notification. The existing scales in Storage Lot 203 may be used. The Contractor shall provide certified accuracy of the scales at Lot 203 to $\pm$10 percent.

b. Inspect and document all vehicles and containers for proper operation and covering.

c. Inspect all vehicles and containers for proper markings, manifest documents, and other requirements for waste shipment.

d. Perform and document decontamination procedures prior to leaving the worksite and again before leaving the disposal site.

3.1.5 Disposal

All contaminated materials classified as hazardous under RCRA (40 CFR Part 261) that are removed from the site shall be disposed of in a RCRA hazardous waste treatment/disposal facility permitted to accept such materials.

All construction rubble materials excavated from the site shall be disposed of in a North Carolina-approved solid waste disposal facility permitted to accept such materials.

All decontaminated metal material shall be taken to a metal recycling facility.

-- End of Section --

SECTION 13100

DRUM AND CONTAINER REMOVAL

PART 1 GENERAL

1.1 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

AMERICAN PETROLEUM INSTITUTE (API)

API 2015 Cleaning Petroleum Storage Tanks

1.2 SUBMITTALS

a. Compatibility Testing and Hazard Categorization Support Documentation.

b. Manifest Documentation

c. Certification of Industrial Hygienist

1.3 DEFINITIONS

The following definitions shall apply to all removal requirements.

1.3.1 Spill

A spill shall denote both an intentional and unintentional uncontrolled discharge or release resulting in any quantity of a possibly hazardous constituent running off or about to run off the external surface of equipment or other source, as well as contamination resulting from those releases.

1.3.2 Leak

Leak or leaking shall denote an instance in which any article, container, or equipment has a liquid or semi-liquid on any portion of its external surface.

1.3.3 Container

A container shall be any portable device with a capacity less than of equal to five gallons in which a material can be stored, handled, transported, treated or disposed of.

1.3.4 Drum

A drum shall be any portable device with a capacity greater than five gallons in which a material can be stored, handled, transported, treated or disposed of.

1.3.5 Open

A container or drum shall be considered open if there are any visible holes on the surface of the container or drum, or if the container or drum appear to be leaking.

1.4 HEALTH AND SAFETY

1.4.1 Training

Provide each employee and visitor to the site with a copy of the site Health and Safety Plan. Instruct employees on the dangers of chemical exposure, respirator use, decontamination, and applicable OSHA and EPA regulations prior to the start of work.

1.5.2 Certified Industrial Hygienist (CIH)

Obtain the services of an industrial hygienist certified by the American Board of Industrial Hygiene to regulate training, review and approve removal plans, and determine the need for personnel protective equipment in performing removal work.

PART 2 PRODUCTS

2.1 OVERPACK DRUMS

Overpack drums shall meet all federal, state, and local regulations regarding waste containment and transportation. Overpack drums other than 55 or 95 gallon capacity may be used, but must meet the corrosion and reactivity requirements specified in the following sections. The Contractor shall notify the Navy's Technical Representative for approval prior to utilizing any overpack drums not specified below.

2.1.1 Steel Overpack Drums

Steel overpack drums shall have an 55-gallon capacity and have an open-head with a corrosion resistant epoxy liner, bolt ring, bolt nut, and rubber sponge gasket.

2.1.2 Polyethylene Overpack Drums

Polyethylene overpack drums shall have a 95-gallon capacity and shall be ultra violet light inhibiting with a closed cell polyethylene gasket.

2.2 Rinsate Solutions and Solvents

Rinsate solutions shall be required to triple-rinse and remove any residual solids, liquids, or vapors from the drums and containers.

PART 3 EXECUTION

3.1 TEMPORARY DRUM STORAGE

A temporary processing area, a temporary rinse area, and a temporary staging area are to be constructed within the secured (fenced) portion of the site. The bermed processing, rinsing, and staging areas shall be lined with 40 mil. polyethylene sheeting or equivalent. A detail of the temporary drum storage area is located in the construction drawings.

3.2 REMOVAL OF DRUMS AND CONTAINERS

Remove all drums and containers from the ground surface and the excavated pit areas as shown on the construction drawings. All leaking or open drums and containers holding liquids, sludges, or solids, as well as deteriorated drums that may rupture during handling shall be placed into overpack drums compatible with the drum's contents.

Empty and deteriorated drums shall be transferred to the drum staging area.

If the potential exists for spilling the liquid contents of the drums and containers during the excavation or moving process, the liquid shall be transferred to an overpack drum using a portable pump capable of transferring the liquid to an appropriate container prior to moving the existing container.

If a rupture occurs during the excavation or moving process, the spilled drum contents and affected soil shall be contained, collected, and overpacked. Remove all contaminated soil as delineated in the construction drawings as well as removing a two foot width of soil around and beneath the perimeter of any spill area. The soil shall be placed in the overpack drum containing the spilled drum contents. All excavations shall remain open until the excavated areas are sampled, tested, certified to be clean and approved by the Navy's Technical Representative.

Transfer all overpack drums, drums and containers holding liquids, solids, or sludges to a lined containment area for compatibility testing and hazard categorization.

3.3 PROCESSING OF DRUMS, CONTAINERS AND THEIR ASSOCIATED CONTENTS

The Contractor shall be responsible for all hazard categorization and waste compatibility testing in accordance with all Federal, State, and local regulations. The Contractor shall be responsible for providing the disposal facilities with all necessary waste analysis and profiles that may be required for waste disposal acceptance. The Contractor shall perform any sampling and analyses required to verify or supplement the analytical results provided at the end of this section and to profile the waste materials for disposal.

3.4 SITE ENTRY AND SAFETY

Initially identify the size, color, condition, type and identifying markings on each of the drums and containers. In addition to the drum categorization and testing results, provide daily recording of

meteorological conditions and other pertinent information regarding site conditions and operations.

Personnel safety monitoring procedures as described in the Health and Safety Plan will be strictly adhered to during the handling, hazard characterization process and the compatibility testing. Personnel safety monitoring equipment shall include, but not be limited to, a combustible gas indicator for monitoring the lower explosive limit (LEL) and oxygen content of the ambient atmosphere, a photoionization detector, and a radioactivity survey meter. Testing, characterization, and handling operations shall be monitored with the radiation survey instrument, organic vapor detector, and combustible gas indicator.

NATIONAL INSTITUTE OF OCCUPATIONAL SAFETY AND HEALTH (NIOSH)

NIOSH 85-101	1990 NIOSH Certified Personnel Protective Equipment List

1.2 SUBMITTALS

Submit the following:

1.2.1 SD-02, Manufacturer's Catalog Data

a. Cleaning agents

b. Gasoline-oil-resisting rubber gloves and boots

c. Respiratory protective equipment

d. Disinfectant

Submit identification for the items by designated name, specification number, project contracting number, and intended use.

1.2.2 SD-06, Instructions

a. Tank cleaning agents

Submit material safety data sheets for materials to be used at the job site, in accordance with 29 CFR 1910.1200.

1.2.3 SD-08, Statements

a. Tank certification of safety

1.2.3.1 Tank Certification of Safety

Submit certification, from an NFPA certified "Marine Chemist" stating that tank is safe for hot work and that special precautionary measures have been taken for workers to enter the tank to perform the work.

1.2.4 SD-10, Test Reports

a. Tank contents tests

1.2.5 SD-13, Certificates

a. Respiratory protective equipment

b. Combustible gas indicator

c. Hydrogen-sulfide (H_2S) indicator

d. Oxygen meter

e. Velometers

Submit certificates for the items listed. Where equipment or materials are specified to conform with the standards of organizations, such as National Institute for Occupational Safety and Health (NIOSH), Underwriters Laboratories (UL), and American Petroleum Institute (API), include a label or listing indicating compliance. In lieu of the label or listing, the Contractor may submit a test report from an approved testing organization stating that the item has been tested in accordance with the specified organization's test methods and that the item conforms with the organization's standard or code.

1.2.6 SD-18, Records

a. Tank disposal paperwork

1.3 QUALITY ASSURANCE

1.3.1 Modification of References

Except as modified herein, the work shall conform with the recommendations of API RP 500C and API RP 2003, API PUBL 2015. Where the word "should" appears in these publications, substitute "shall."

1.3.2 Copies of Standards

Furnish four copies of API RP 500C AND API RP 2003, API PUBL 2015.

1.3.3 Regulatory Requirements

a. Obtain permits required to comply with local state, and federal regulations.

b. Hazardous wastes, such as water, sediment, and sludge, shall be packaged, labeled, stored, transported, treated and disposed of in accordance with 40 CFR 260 through 40 CFR 266 and state and local regulations. Transporters, sorters, treaters and disposers must be certified and have EPA ID numbers. Payment for disposal of hazardous waste will not be made until a completed hazardous waste manifest from the treatment or disposal facility is returned, and a copy furnished to the Government.

1.4 DELIVERY AND STORAGE

Deliver equipment and materials to the site in an undamaged condition bearing the manufacturer's name and brand designation. Store equipment and materials off the ground to provide proper ventilation, drainage, and protection against dampness. Replace defective and damaged equipment and materials.

1.5 JOB CONDITIONS

1.5.1 Safety

Ensure that employees are trained in the requirements of 29 CFR 1910.1200 and understand the information contained in the MSDS for protection against toxic and hazardous chemical effects.

1.6 SCHEDULING AND SEQUENCING

1.6.1 Sequence of Primary Phases of the Cleaning Procedure

a. Planning the operations

b. Preparation for cleaning

c. Vapor-freeing of the tank

d. Cleaning the tank

e. Clean-up, residue disposal, inspection, and acceptance.

1.6.2 General Scheduling

Complete the work specified in this section before any other work in the tank is started. The work includes the complete interior cleaning of the storage tanks.

PART 2 PRODUCTS

2.1 MATERIALS

2.1.1 Cleaning Agents

a. Detergent: FS O-D-1276.

b. Solvent: FS TT-T-291, Type II, minimum flashpoint of 60 degrees C.

c. Approved commercial cleaning agent.

2.2 EQUIPMENT

Furnish necessary clothing and equipment for the work and protection of people cleaning the tanks. Electrical equipment and wiring shall be in accordance with NFPA 70, Class 1, Group D, Division 1. Provide any item or items for the protection of these people including but not limited to the following:

a. Gasoline-Oil-Resisting Rubber Gloves and Boots: Gauntlet type and conductive type respectively (acid-proof rubber is an acceptable material); furnished for each person handling sludge materials on the exterior of the tank, plus one extra pair each for emergency use.

b. Cotton Coveralls and Hard Hat: Light colored; one change per person per day, and an adequate supply of chemical-resistant disposable coveralls to be worn over cotton coveralls.

c. Combustible Gas Indicator, Hydrogen-Sulfide (H_2S) Indicator, Benzene Indicator and Oxygen Meter.

d. Shovels, Buckets, Brooms, Wrenches, Scrapers, Squeegees, Wire Brushes, Scrub-Brushes, Ladders, Staging, and Other Tools: Do not use brooms or brushes that have plastic or synthetic bristles.

e. Lighting: UL 844, explosion-proof, minimum 50 footcandle, floodlight type, or Mining Enforcement and Safety Administration (MESA) approved, explosion-proof, portable battery-powered light.

f. Air Movers for Tank Ventilation: Explosion proof electrically operated or air driven. Nonferrous fan blades. Use velometers for measuring velocity.

g. Soap for Personnel Washing: Non-phosphate type.

h. A.B.C. Fire Extinguishers: UL listed 2A: 40B: C, 2A: 20B: C, or 4A: 30B: C; minimum 15 pound capacity.

i. First Aid Kit: One 16-unit kit for each 25 persons.

PART 3 EXECUTION

3.1 REMOVAL AND DISPOSAL OF TANKS

Furnish labor, materials, and equipment to remove and dispose of products remaining in the tanks; clean and vapor free the tanks; sample wash water to determine if contaminated; dispose of tanks and associated piping.

3.2 PROJECT CONDITIONS

The following conditions shall be met while the aboveground storage tank cleaning and removal is underway:

a. The Contractor's qualified supervisor is present.

b. The Contractor's personnel have been briefed by the supervisor on the procedure and role of each employee in the event of an emergency.

c. Required equipment is approved and properly located.

d. Tank air is monitored and corrective action is taken to ensure that the vapor concentration is less than 10 percent of the lower flammable limit (LFL), hydrogen sulfide is less than 10 ppm permissible exposure level (PEL), benzene is less than 10 ppm PEL and oxygen content is a minimum of 19.5 percent.

e. An NFPA certified "Marine Chemist" has certified that the tank is safe for hot work, and that the required special precautionary measures have been taken due to the potential health hazard to the worker that still exists, even when the vapor concentration is well below the LFL. The Contractor shall be responsible for reviewing the record drawing(s) of the tanks to be cleaned.

f. People entering the area leave smoking materials such as cigarettes and flame-producing devices at a previously determined location.

g. When work involves handling and disposal of hazardous waste, the Contractor has a copy of 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, 40 CFR 265, and 40 CFR 266 in his possession.

h. Permit only personnel authorized in the safety plan within 100 feet of the tank perimeter.

3.2.1 Traffic Control

Direct traffic minimum 200 feet away from the tank cleaning area. Set up road blocks and warning signs. Do not operate vehicles in hazardous areas.

3.2.2 Miscellaneous

Ensure that the manufacturers have labelled containers holding products involving hazards in use or storage, in accordance with 29 CFR 1910.1200. Label containers used to store, transport, or dispose of hazardous waste in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, 40 CFR 265, and 40 CFR 266 and State Regulations. Remove small objects of ferrous metal within the working areas to prevent the accidental striking of a spark. Place equipment upwind of tank openings at highest elevation possible; do not place in a spot lower than the surrounding terrain. Provide floodlights to illuminate the work area, if necessary, without the need for battery operated handlights. Provide scaffolding, platforms, and ladders for secure, safe accessibility to tank surfaces. Install electrical equipment in accordance with API RP 500C. Do not use artificial lights inside tank until the tank is vapor-free.

3.2.2.1 Grounding and Bonding for Equipment

Provide grounding and bonding for equipment which may generate static electricity.

3.2.2.2 Fire Extinguishers

Furnish two carbon-dioxide fire extinguishers of minimum 15 pounds capacity each, in the immediate vicinity of the work. Provide a continuous fire watch. CAUTION: Do not discharge high pressure carbon dioxide extinguishers where explosive vapors exist since the discharge can cause a spark which will ignite the vapors.

3.2.2.3 Removal of Ignition Sources

Remove sources of ignition from the cleaning area. Do not permit ignition producing devices, including matches, lighters or cigarettes, within 100 feet upwind and 200 feet downwind of a tank.

3.2.2.4 Survey of Hazardous Areas

Carefully survey the entire area around the tank to be cleaned to ensure that there are no hazardous areas and that all unauthorized personnel are cleared from the area. Ensure that there is no possibility of anyone smoking in the immediate vicinity. Hazardous areas are defined as follows:

a. Interior of tanks.

b. Areas within 100 feet from points having flammable vapor emissions which, for example, are from the exhaust manholes of tanks under repair, open vents or pressure vacuum vents (breather valves) of active tanks in the vicinity of tanks under repairs or cleaning.

CAUTION: Allowance shall be made for 4 or more miles-per-hour winds by increasing the size of the hazardous area to a minimum of 200 feet on the downward side.

3.3 INSPECTION

3.3.1 Inspection of Equipment

3.3.1.1 Respirators

Respirator users shall inspect their respirators in strict accordance with the instructions provided by the manufacturer.

3.3.1.2 Monitoring Equipment

Calibrate each day before use:

a. Combustible gas indicator

b. Oxygen meter

c. H_2S Indicator

3.3.1.3 Other Equipment

Ensure:

a. Proper grounding and bonding;

b. Explosion-proof motors; and

c. Explosion-proof lighting.

3.3.2 Personnel Inspection

3.3.2.1 Clothing

Personnel for Proper Attire Commensurate with Hazards Involved: Check for:

a. Clean clothing in good condition (wear freshly laundered clothing at the beginning of the job and at the start of each workday thereafter).

b. Boots and gloves of approved type and in good condition.

3.3.2.2 Gum or Tobacco Chewing

Ensure that gum or tobacco chewing is prohibited.

3.3.2.3 Physical Defects or Injuries

Ensure that people have no physical defects or injuries which may prevent their wearing respirators or which may cause rescue to be difficult. No beards, sideburns, or large mustaches shall be allowed on people who must

wear respirators.

3.3.2.4 Alcoholic Beverages and Drugs

Ensure that people entering the tank are not under influence of alcoholic beverages and drugs.

3.3.2.5 Females with Child-Bearing-Capability

Females with child-bearing capability shall not be allowed to work in contaminated areas or in leaded gasoline or chemically contaminated tanks since they may be seriously affected by organic lead compound or other chemical contaminants.

3.3.2.6 Hazardous Areas

Check hazardous areas as defined in paragraph entitled "Survey of Hazardous Areas."

3.4 FUEL REMOVAL

All possible fuel will be pumped or otherwise removed from the tank. Consider remaining fuel contaminated or waste fuel; pump into 55 gallon drums or other suitable containers for disposal in accordance with approved procedures meeting local, state, and federal regulations. Dispose of remaining fuel emulsions in accordance with applicable local, state, and federal regulations. Drums or tanks used for containerizing waste fuel will be furnished by the Contractor.

3.5 PURGING

Remove flammable vapors in accordance to API RP 1604. Tanks shall be certified as "Gas Free" prior to further work.

3.6 TANK CLEANING

For the interior of the tanks, the shell, bottom, columns, roof, roof beams, and interior accessory equipment such as pumps, piping, and ladders, shall be cleaned to the sound surface of the lining or coating, free of rust, dirt, scale, loose materials, fuel, oil, grease, sludge, and other deleterious materials. Do not damage sound existing lining material. Remove unsound or loose lining or coating and clean the surfaces exposed thereby to bare metal or concrete as applicable. Immediately notify the Navy's Technical Representative if the lining or coating is deteriorated or loose.

3.6.1 Water, Sediment, and Sludge Analysis

The Contractor shall be responsible for testing the water, sediment, and sludge in accordance with 40 CFR 261. Submit laboratory reports to the Navy's Technical Representative describing sampling and testing procedures used, test results, and findings. If the Contractor's tests determine that the water, sediment, and sludge are hazardous, then the hazardous wastes shall be packaged, labeled, stored, transported, treated and disposed of in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR

263, 40 CFR 264, 40 CFR 265, and 40 CFR 266. Transporters, storers, treaters and disposers must be certified and have EPA ID numbers. Payment for disposal of hazardous waste will not be made until a completed hazardous waste manifest from the treatment or disposal facility is returned, and a copy furnished to the Government. Nonhazardous or hazardous wastes shall be handled and disposed of as described below.

3.6.2 Water Removal and Disposal

Pump or otherwise remove water from the tank. Ensure that the sludge and sediment are not pumped out or mixed with the water. The water shall be packaged, labeled, stored, transported, treated, and disposed of in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, 40 CFR 265, and 40 CFR 266.

3.6.3 Sludge and Sediment Removal and Disposal

Squeegee or brush any sludge, sediment, or other loose material into piles, shovel into buckets or other suitable containers, and remove from the tank.

3.6.3.1 Removal of Sludge

Sludge in the tank shall be disposed of by the Contractor. Package, label, store, transport, treat, and dispose of hazardous sludge and sediment in accordance with 40 CFR 260, 40 CFR 261, 40 CFR 262, 40 CFR 263, 40 CFR 264, 40 CFR 265, and 40 CFR 266.

3.6.4 Washing

After water, fuel, and sludge have been removed, thoroughly wash the tank interior. Minimize the use of water; substitute brush blasting when practical. Start washing at the top of the walls and columns and work down to the floor. Wash the floor last starting from the sides and working towards the sump. Wash to remove oil, sludge, wax, tar, and other fuel residue adhering to the surface. Wash by any one or a combination of the following methods:

a. Use only fresh water under pressure.

b. Apply a detergent conforming to FS O-D-1276 by spray or brush and soak approximately 30 minutes.

c. Apply a detergent cleaning solution by spray or brush and allow to soak approximately 30 minutes. The cleaning solution shall be either a one-to-one ratio of detergent conforming to FS O-D-1276 and solvent conforming to FS TT-T-291 or an equivalent commercial cleaning agent as approved by the Navy's Technical Representative.

d. Hand-scrub the surfaces vigorously with long-handled stiff-bristle brushes. Wet the brushes intermittently with fresh cleaning agent during scrubbing process. For heavily oil-soaked areas which still appear to retain some residue after first scrubbing, give a second application of cleaning agent and repeat the scrub process a second time. Scrub until clean.

e. Rinse the surfaces thoroughly with fresh water.

3.6.5 Wash Water, Detergent Solution, and Sediment Removal

During the washing process, operate a portable pump continuously with suction hose extended to the tank bottom to remove water, detergent, dirt, oil, or other loose materials washed off. Following the final rinse, pump, squeegee, and mop the tank dry.

a. Prior to discharge or disposal, test the wash water, sediment, and sludge in accordance with paragraph titled "Water, Sediment, and Sludge Analysis," if previous test results showed that the water, sediment, and sludge were hazardous.

3.7 FINAL CLEAN-UP

After the Navy's Technical Representative has inspected and accepted the tank cleaning and before final inspection, accomplish the following work:

3.7.1 Stenciling Tank

Stencil on the tank in 3/4-inch letters adjacent to the manhole openings the following data:

Date Cleaned

Contractor Name

Address

3.7.2 Restoration of Site to Original Condition

Remove, from the site, debris and equipment and materials used for the cleaning operations. Restore the site to its original condition.
